

The hydraulic system remains airtight during the bleeding process.

Reliable non-return function, facilitating one-man operation.

Bleeding of the system in a matter of minutes.

Wear of the threads in the caliper is prevented (opening and closing during the bleeding process).

For all hydraulic systems such as brakes and clutches

The Stahlbus brake bleeder valve is a simple replacement for the existing bleed nipple.

Tested under extreme conditions by TÜV Rheinland.

Please do not forget to order the stahlbus dust cap, too. Only this protects the inner O-ring. The original rubber cap is too short.
